COMMUNITY SERVICES — ER DIAGRAM

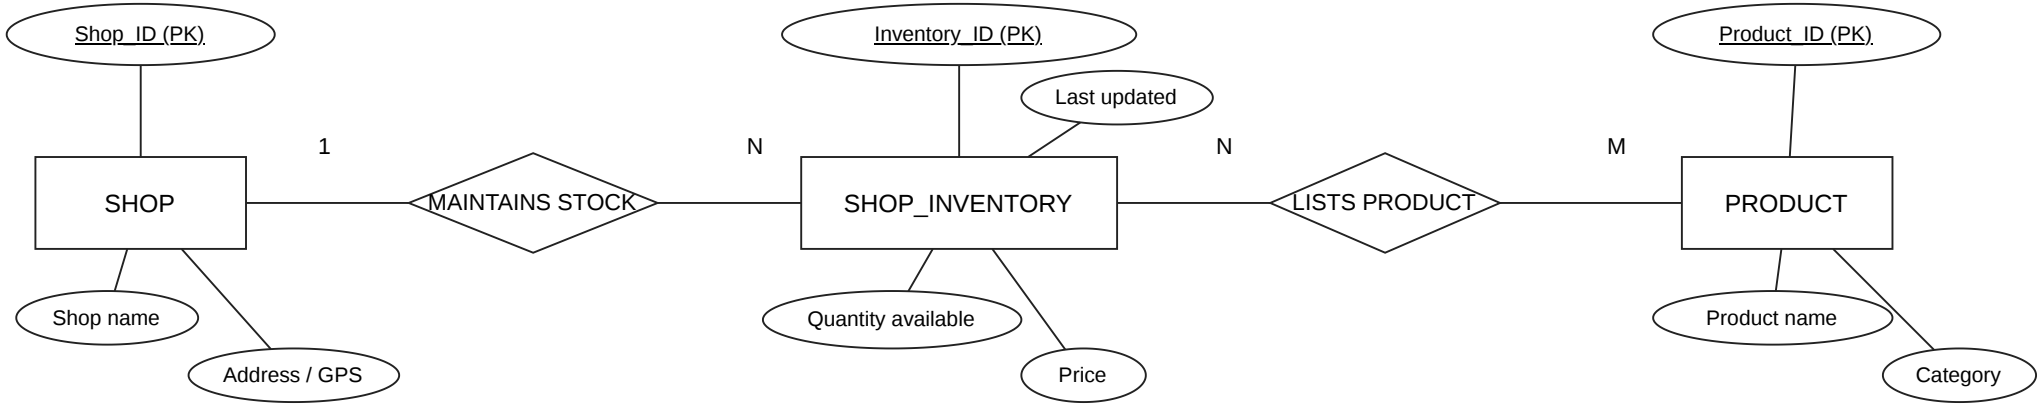

Cardinality: one user submits many complaints (1:N); many complaints may map to one department (N:1); one complaint can have many evidence files and status-history entries (1:N).

PERSONAL SERVICES — ER DIAGRAM

Cardinality: one customer can create many service requests (1:N). Each request is assigned to one provider, and one provider can receive many requests (N:1). Provider accept/reject and progress are recorded in SERVICE_REQUEST status fields.

AGRICULTURE PRODUCT AVAILABILITY — ER DIAGRAM

SHOP and PRODUCT have an M:N relationship resolved by SHOP_INVENTORY. Each inventory record belongs to one shop and one product. Use UNIQUE(shop_id, product_id) to avoid duplicate product listings per shop.

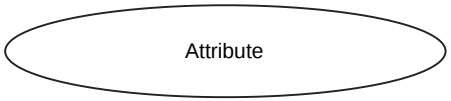

ER DIAGRAM NOTATION

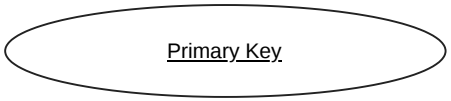

Rectangle = entity

Diamond = relationship

Oval = attribute

Underlined attribute = primary key

1 — N

Cardinality ratio: one-to-many

DOUBLE LINE

Total participation: every entity must participate

Only use weak entities, identifying relationships, multivalued attributes, derived attributes, or total participation when the model genuinely requires them. The current MVP does not need to force these symbols into the diagram.
